- Implemented key modules including payments, parking management, complaints handling, and emergency requests.
- Collaborated with UI/UX designers and backend developers to ensure seamless functionality.
- Optimized application performance and scalability.
- Contributed to building a centralized residential management platform.

## PROJECTS

---

### Resiido (Apartment Management System)

(2025 - Present)

A mobile application that digitalizes apartment operations, enabling residents to manage payments, parking, complaints, emergencies, and community bookings from one platform.

### FarmEase - Smart Farming Toolkit (Prototype)

(2023)

An online toolkit of a prototype smart farming application created in Figma that provides a livestock monitoring tool, farm management, and resource management without having to install it.

### Portfolio Website

(2025)

A complete responsive Web site written in HTML and CSS, JavaScript, including project samples, interactive user interface and navigation.

### EstateAgent Pro – Property Search Web Application

(2025)

Developed a responsive property search web application using React with advanced filtering and detailed property pages including image gallery, floor plan, and map. Implemented a favourites system with drag-and-drop and optimized the interface for desktop, tablet, and mobile devices.

### Stadium Management System

(2025- Present)

A Stadium Seat Booking and Management System is a Java-based project designed to let users reserve seats for events, track seat availability, and manage stadium operations efficiently. This system is ideal for a group of CS undergraduates and highlights skills in Java, GUI development, SQL database management, and system design.
